

HEME

【HELP ME TOKEN】

WHITE PAPER 1.0

DISCLAIMER

This white paper does not constitute an offer or invitation, or any other sale or purchase of shares, securities, or any of the assets of the community.

This white paper describes the community business objectives and the issue by the DAO community of HEME Tokens.

It has not been reviewed, verified, approved or authorized by any regulatory or supervisory authority.

This white paper has been issued by on October 8, 2022.

The purpose of this white paper is to provide prospective with the information on

the DAO HEME community project to allow the prospective swap to make their own decision as

to whether or not it wishes to proceed to swap HEME Token.

The following content and information provided herein is accurate to the best of their knowledge and there are no other facts,

the omission of which, would make misleading any statement in this white paper.

It may not be comprehensive and does not imply any elements of a contractual relationship.

This document does not constitute the provision of investment or professional advisory services.

The community does not guarantee, and accept legal liability whatsoever arising from or connected to, the accuracy, reliability, or completeness of any material contained in this document.

It is the responsibility of prospective swap of HEME tokens to undertake their own due diligence.

VISION

“Global Adoption of HEME & The Ecosystem”

HEME projects are adding both value and utility to the digital economy, and to disrupt the traditional finance world using applications built on blockchain technologies. Our ecosystem is purposely created to maximize the use of our tokens and to accelerate the global adoption.

MISSION

The Mission of HEME is to propose a better way to monetize the world of Defi and to provide people seamless access to a variety of Decentralized Financial Applications..

INTRODUCTION

HEME(HELP ME) token goes beyond replacing cash, evolving with unique solutions emerging in finance, payment, secure transactions and other decentralized utilities. HEME token is the solution, designed for investors in the cryptocurrency market who are looking to make their cryptocurrency work just like any other form of capital, such that they can ensure a return on investment in any market.

HEME FINANCIAL PROJECTS

Today, almost all financial services are run by banks. Investments, For example, by definition, is the use of capital to earn more capital. Investor use a bank to put their money into interest or dividend-making instruments in order to grow their wealth. The problems with financial services are increasingly becoming obvious to every HEME: compounded costs due to middlemen, slow transactions, delays for cross-border transactions, and inaccessibility to many sectors of the population. A myriad of fintech solutions have been brought in to improve the system, but fundamentally the underlying banking system is still in control, so fintech has brought only limited improvements.

The cryptocurrency industry is based on a simple premise: people should be fully in control of their finances. While it seems like a simple and obvious statement, the current systems are far from providing financial services that are truly under the control of the people who use them.

Cryptocurrency and Decentralized Finance (DeFi) offer a way to start a new system, circumventing the difficulties faced in changing the finance industry.

While crypto has attracted billions in investments, decentralized financial services are lagging. When it comes to investment in cryptocurrency, crypto investors can buy and sell, but that is it. The cryptocurrency itself can not be invested in the same way fiat currency can be. Initial attempts to create peer-to-peer lending and asset tokenization so far have proven partial and unreliable, so investors have extremely limited options when it comes to an investment of their crypto assets. The potential is enormous to provide financial services in crypto, the same way they are offered in fiat currency..

HEME Community Mutual autonomy Token

1. Summary

Full name **HELP ME TOKEN** .

Symbol: **HEME**

decentralized autonomous organization (DAO)

Token. HEME is a decentralized, fast-deflationary token based on the Heco chain. HEME Swap is 6.5% of each transaction to all holders through smart Contracts, 3% for reward SHIB-HECO token , marketing fee 2% , directly in black hole destruction 1%, as a deflationary mechanism . The more frequently trade, the more dividends you get, the more token you hold, the more dividends you will get.

HEME Sell is 3% Liquidity Fee , 3% for reward SHIB-HECO token , marketing fee 3% , directly in black hole destruction 1%

2. The Origin of HEME

HEME was launched by DAO of HEME community worldwide members. Initially , it was used for community members' reward , commercial, community voting , community management, etc.

Issue price: 0.000000000001 USDT

HEME DISTRIBUTE CHART

- 3. HEME's mechanical vision ,
- HEME has achieved that each wallet address is a node, and each node is a mining machine, namely, The dividend model of holding
- coins. The more coins you hold, the more dividends you will get,
- The larger the transaction, the greater the dividend, which
- inspires the power of each node. It is speculated that by
- creating HEME to help the low-level groups who do not have the ability or resources to obtain more wealth opportunities in the real , poor man BTC.
- society to realize their hopes and dreams by creating a real-time efficient, unique and simple reward mechanism such as HEME
- 4. The unique charm of HEME
- HEME has a unique incentive and deflationary mechanism, as well as the characteristics of liquid trading mining.
- Specifically speaking: The HEME in the coin holder's wallet
- will receive the dividend reward for every sales transaction in the

- world according to the locked blockchain smart contract, which
- cannot be tampered with, To ensure that each token holder gets
- a fair income. It is a true decentralized smart contract dividend, and every transaction dividend is automatically transferred to the account wallet in real time. The larger the amount of HEME in the wallet, the larger the interest dividend, and the longer the wallet is stored, the larger the cumulative dividend, just as people deposit fiat money in the bank to earn interest. Regardless of the long-term holding or transfer, trading, circulation of HEME can generate income, this design
- is particularly conducive to personal and family asset
- allocation, can effectively resist the reduction of wealth
- caused by inflation, to achieve a steady appreciation of wealth assets .

5. HEME's destruction mechanism and its value

Since all actions on the chain will trigger the destruction

of the dividend mechanism, the frequent increase in the number of transactions hence the name

Digital gold (digital gold), commonly used It is HEME of the

important components of personal and family asset allocation.

- 6

- In addition, HEME is also widely used by people for rewards
- after mission goals are achieved, charity support and
- interpersonal relations between courtesy and reciprocity,
- representing the sublimation of friendship and emotions
- between people as precious as gold. HEME was once crazy young and short. Video enthusiasts use it as a digital gift for
- marriage proposals. Therefore, HEME has quickly become an
- indispensable digital asset in the digital currency wallets of many young people.
- Due to the current extremely low price of HEME, many holders ,call it the poor man's Bitcoin.

6.1 DeFi

DeFi is the abbreviation of Decentralized Finance (distributed finance), generally refers to Encrypted assets, financial smart contracts and agreements built on the smart contract platform are currently

Mainly through the Ethereum network. The so-called "Defi", in short, is full use

Blockchain technology (including smart contracts, decentralized asset custody, etc.) will integrate traditional financial services

All the "intermediary" roles in the system are replaced by codes as to achieve the most efficient financial services. The minimization of large-scale and cost.

DeFi is to move traditional finance to the blockchain network, but compared to traditional finance, it Decentralization is achieved through the blockchain, that is, the role of the middleman is removed, thereby reducing

- The huge cost brought by the intermediate links. The ultimate goal of DeFi is to realize the tokenization of assets.
- Use smart contracts to replace privileged institutions in the traditional financial
- Receive financial services, improve the operating efficiency of the entire financial system, and reduce operating costs.
- Communication problem, this problem limits the possibility of asset trading in decentralized exchanges.
- With the help of DeFi rich technical ecological services, HEME can greatly expand financial attributes and promote
- Project ecological development.

6.2 The relationship between HEME and DeFi

The most obvious benefit of liquidity pools is that they ensure a nearly continuous supply of liquidity for traders who want to use decentralized exchanges. They also provide an opportunity to profit from their cryptocurrency holdings by becoming a liquidity provider and earning transaction fees.

In addition, many projects and agreements will provide additional incentives for liquidity providers to ensure that their token pool remains large, thereby reducing slippage risk and creating a better trading experience. Therefore, this creates an opportunity to gain more revenue from liquidity mining reward tokens in exchange for becoming a liquidity provider.

Liquid mining is an important fuse for defi's popularity. As early as a year ago, there were many defi-related projects, but what really made defi mining a hot spot was liquid mining. Although the market has experienced a sharp decline in the past two days, many liquid mining projects still have many benefits. Those investors who are involved in liquidity mining early on, are familiar with the relevant rules, and have sufficient funds, earn a lot of money.

7. Our goal

In the early stage, a strong consensus HEME community was established. Create more 1 million token holding address . The peer-to-peer global distributed HEME community until the formation of the HEME ecology. The biggest advantage of the DAO lies in its Global.

7.1 Our development:

HEME is the HECO ecological token.

Blockchain enthusiasts jointly formed and developed a decentralized autonomous project. HEME is committed to HECO

The expansion of the financial properties and the extension of financial attributes are committed to making up for the shortcomings of the community currency. Through automation, it will support DeFi to gather reasonable wealth, cross-chain, decentralized finance, payment, and other landing applications, as well as market scenarios.

HEME GLOBAL DAOCOMMUNITY
